#### **RESEARCH PROGRAM SUMMARY**

Much of my recent effort has been geared increasingly toward development of policy in the federal government, and work with professional and research organizations and agencies to facilitate the translation, dissemination and implementation of research to practice. This has been articulated in federal policy through conferences that I have co-chaired and co-funded on participatory research, translational research, and alternatives to RCT designs for the

monitoring and scientific evaluation of large-scale, complex programs, and Institute of Medicine (IOM) committee reports on “Bridging the Evidence Gap,” “and “Evaluating Progress on National and Community Efforts in Obesity Control.” I have conducted research programs to improve and validate methodologies and measures of change at national, state, and local levels of program and policy and to improve the peer review of participatory research grants. I chaired the IOM committee on the review of Prevention Research Centers sponsored by Congress through CDC, and subsequently joined CDC with eventual responsibility for implementing some of the recommendations of the IOM committee.

My recent work in tobacco and obesity control has provided a focus for much of the more generic methodological and research-to-policy-and-practice emphasis described above. Some of the most significant of my recent publications include:

- Green, L.W., Kreuter, M.W. *Health Program Planning: An Educational and Ecological Approach*. 4<sup>th</sup> ed. St. Louis: McGraw-Hill Publishing Co., 2005 (released August 2004). With Instructor’s CD (PowerPoint slides and text bank for each chapter; web resources; bibliographies). This book has been widely adopted in university courses on health program planning. The model it presents has evolved from the first edition to the fourth as the PRECEDE-PROCEED model, with over 1100 published applications around the world, and possibly thousands more of unpublished applications by practitioners, planners, and policy-makers.
- Green, L.W., Tracing Federal support for participatory research in public health; and Green, L.W., George, M.A., Daniel, M., Frankish, C.J., Herbert, C.P., Bowie, W.R., O’Neill, M. Guidelines for participatory research in health promotion. Both in Minkler M, Wallerstein N (Eds). *Community-Based Participatory Research for Health*. San Francisco: Jossey-Bass, 2003, pp. 410-428. These guidelines, first published by the Royal Society of Canada in a monograph based on research sponsored by the society for which I was the Principal Investigator, have become widely used by funding agencies (e.g., the California Breast Cancer and Tobacco Control Research Programs, Office of the President, UC; CDC, and various foundations).
- Green, L.W., Nathan, R., Mercer, S.L. The health of health promotion in public policy: Drawing inspiration from the tobacco control movement. *Health Prom J Australia* 12(2): 12-18, 2001. This is one of several articles summarizing the systematic attempts made at CDC under my leadership to draw the major lessons learned from the great public health success stories of the last third of the 20<sup>th</sup> century, particularly in tobacco control, hypertension control, and injury prevention.
- Green, L.W. [What can we generalize from research on patient education and clinical health promotion to physician counselling on diet?](#) *European J. of Clinical Nutrition* 53 (Suppl 2): S9-S18, 1999. This article summarizes inferences for dietary counselling by physicians, drawn from other areas of patient education, and predates my five-year effort at CDC to do this cross-problem inference for broader public health problems.
- Best, A., Stokels, D., Green, L.W., Leischow, S., Holmes, B., Buckholz, K. An integrative framework for community partnering to translate theory into effective health promotion strategy. *American Journal of Health Promotion* 18(2): 168-176, 2003. This reflects the collaborative work I helped launch between US and Canadian scholars and agencies (CDC, NIH, Canadian Institute of Health Research, National Cancer Institute of Canada) to synthesize lessons from community and policy studies into a systems framework for translation of theory and research into program planning and policy.
- Green, L.W., Mercer, S.L. [Community-based participatory research: Can public health researchers and agencies reconcile the push from funding bodies and the pull from communities?](#) *American Journal of Public Health* 91(12):1926-1929, Dec. 2001. This article helped launch the participatory research initiative of CDC, for which I had lead responsibility as Director of the Office of Science and Extramural Research.
